PACK PLATE

— Compatible campus dining for the whole pack —

Ethan Goodman · Moe Ko · GROUP 4 · Morgan Simon · Savanah Hendzel

Mission Statement

NC State students with different dietary needs must search fragmented dining information one item at a time, making group meal decisions difficult. PackPlate combines campus hours, menus, nutrition, dietary filters, crowd levels, and transparent data warnings in one mobile-friendly view. We will test whether groups can choose a compatible dining location in under two minutes, compared with the current ten-minute process.

Tech Stack

FastAPI · pytest · Next.js · TypeScript · Docker · PostgreSQL · Python · React

Features

- **Find What's Open –** Track campus dining hours at a glance
- **Filter For Your Needs –** Find food options to suit your dietary preferences, goals, and restrictions
- **Check the Crowd –** See and report about how busy a location is
- **All In One Place –** No need to skip between multiple websites to see hours and menus

Future Additions: Making user accounts, Chatbot integration, More accurate business levels, Integrated chat system

Stakeholders

- **NC State students –** Need fast, accurate information when choosing where to eat to meet their dietary needs
- **Groups of friends –** Need to find one location that works for several people simultaneously
- **NC State Dining –** Owns or publishes the underlying menu, nutrition, and hours data
- **Dining-hall staff –** May receive questions or complaints when published information is incomplete
- **PackPlate maintainers –** Must monitor stale data, scraper failures, crowd reports, and deployment issues
- **University legal/privacy staff –** Need the product to avoid unsafe claims and unnecessary storage of dietary information
